Hassan Ali Software Engineer

Dubai, UAE hassan748_7@hotmail.com +971585736113 Hassan Ali PakDragoon

About

Experienced Software Engineer with solid JS background in React and Node.js, I've honed my skills throughout my career. Well-versed in technology and writing code to create systems that are reliable and user-friendly. Strategic thinker, and innovative creator to develop software that is customized to meet a company's organizational needs, highlighting their core competencies, and further their success. Skilled in building scalable, user-friendly applications using modern JavaScript frameworks and tools like Redux and TypeScript. Proficient in creating reusable components, optimizing performance with techniques like code splitting and lazy loading, and implementing secure, seamless UI/UX designs. My diverse skill set and continuous learning approach enable me to tackle complex analytical challenges efficiently.

Skills

- JavaScript
- React
- Node.js
- Redux, React Query
- RESTful API
- AWS S3, AWS SES, AWS EC2
- Langchain.js (LLM)
- Prompt Engineering
- OpenAI API
- GPT Models Integration
- SQL, MySQL
- Postgres
- MongoDB
- Git
- Github
- Bit Bucket
- Jira
- Heroku, cPanel
- Integration & Automation
- Zapier, Make.com
- Apache Kafka
- Docker

Professional Experience

Software Engineer, Nathan Digital 07/2023 – 07/2024 | Dubai, UAE

- Developed 10+ customized npm packages using TypeScript, integrating them seamlessly into React and Node.js applications, enhancing platform functionality and significantly reducing development time for various projects..
- Collaborated with cross-functional teams to revamp the frontend and backend architecture from traditional to modular component-based structure using React, Node.js, improving scalability and modularity by 40%.
- Implemented React-based configurable UI modules for HR workflows, such as leave approvals, letter generation, and custom approval flows, allowing non-technical users to customize workflows via the UI. This reduced user configuration time by 50%, showcasing expertise in Redux-Saga for efficient state management and MUI for consistent design.
- Implemented secure authentication mechanisms in React apps using JSON Web Tokens (JWT) with a Node.js backend, and integrated Single Sign-On (SSO) solutions, including Microsoft SSO, ensuring seamless and secure access across different services.
- Integrated GPT models into client applications, enabling AI-driven features such as automated customer support and data-driven content generation, enhancing user engagement.
- Successfully migrated legacy data to a new microservices architecture using React for the frontend and Node.js for the backend, ensuring data integrity and smooth continuity for base and 8+ other clients.
- Integrated Workday APIs and ZKTeco Biotime into a React-based attendance module, improving system functionality and reducing configuration time by over 30%.

JavaScript Developer, Reown Logics 10/2021 – 07/2023 | Lahore, PK

- Crafted landing pages for over 5 branding websites and a dashboard for an esports site, incorporated interactive animations and SEO best practices ensuring application performance and responsiveness with React.

- Built a video recording web application to record/upload and share 60 seconds business proposal video, implementing both client-side and server-side using MediaRecorder API, React, NodeJS, MongoDB, AWS EC2 and AWS S3.
- Engineered the frontend and backend of a lead generation platform for job postings using React, NodeJS and Postgres, enhanced data management efficiency by 25%.
- Collaborated on integrating basic GPT models for content generation in job postings and candidate matching, streamlining recruitment processes and improving time to hire.
- Integration of 3rd party APIs (LinkedIn, betterproposal.io, sheets) in more than 10 different CRMs like monday.com and make.com, utilizing both NodeJS and Zapier to make general flows automated and hassle-free.
- Built workflows and integrated webhooks, APIs to automate leads generation from 5 different CRMs to one single dashboard and reduced cost by more than 50%.
- Explored Langchain.js for future applications in automating chatbot interactions and improving customer support response times.

Web Developer, Blue Box Packaging 06/2019 – 05/2021 | Lahore, PK

- Developed a responsive React frontend for order management, reducing order processing time by 30% and improving user experience with real-time error notifications, minimizing errors by 25%.
- Optimized React components and MySQL queries, resulting in a 50% reduction in query response times and smoother interactions for users.
- Enhanced page load speed by 70% through React code splitting, lazy loading, and image compression using the Sharp npm package, significantly improving frontend performance.
- Increased click-through rates by 25% by optimizing meta titles, descriptions, and integrating dynamic SEO components within the React app.
- Implemented AWS SES with Node.js backend and integrated email marketing features into the React frontend, resulting in a 15% increase in repeat customer orders.
- Built a feedback collection UI in React, which helped improve issue resolution time by 40% and raised customer satisfaction scores by 3 points.

Projects

Nathan Digital

- Nathan HR - Human Resources Management System

Reown Logics

- Async Now - A video based business proposal sharing
- QualStream - Platform for leads generation, head hunting, job posting
- Scifshare - Securely sharing data by encryption
- Integration & Automation - Automating the leads flow in CRMs
- Baku Travels: Tour Planning and Hotel booking app
- Taheiya - Car insurance, recovery, auction platform

Blue Box Packaging

- Blue Box Packaging - B2B website to sell customized packaging boxes

Others

- Pro Assist - AI based customer care web app with customized instructions to openAI models

Education

Bachelors in Computer Engineering, The University of Lahore
